Tango wallcovering assembly

Parts List

Tango
Panel(s)

Double
Sided Tape

Step 1

Clean the wall thoroughly and remove anything that might get in the way, such as screws or nails. Measure the wall and determine where you would like to place your Tango installation.

Step 2

Cut the double sided tape into strips the length of each side of the tile(s). Cut one smaller strip to place in the center of the tile(s).

Step 3

Place the precut strips of tape along the edges of each tile. Place one piece of tape in the center of the tile to prevent the tile from lifting from the wall. When ready to place, remove the backing revealing the sticky back.

Step 4

Press the Tango tile onto the wall making sure each strip of tape is making contact with the surface. Use a level to make sure that the placement is perfectly straight.

Step 5

Repeat the necessary steps to bring your design to life making sure to continue to use the level to make sure each tile is correctly positioned.
